Preface

This index represents an attempt to provide a general index to the Library of Congress Classification Schedules using contemporary natural language. The only other general index the compiler has seen, used the inverted headings of the Library of Congress Outline of the schedules.

If a subject could be listed two ways, both headings have been used, e.g., Eastern Germany and Democratic Republic of Germany, 1949-. Also some terms are listed specifically and also under a general heading; e.g., Gasoline engines is listed by itself and also under Engines. No cross-references have been employed.

The index is by no means inclusive - about 1,300 terms are included. The terms represent a wide range of topics in all fields of knowledge and are used by all types of libraries.
